Electronic Device Works

## EDT2400X-SAxx

## (Thread Module with BLE5.3)

## Overview

EDT2400X-SA is a highly integrated wireless thread module for IoT connectivity. It is based on Silicon Labs, EFR32MG24 SoC, and is ideal for extending the 2.4 GHz wireless range using mesh topology. EDT2400X-SA can be used very appropriately for smart home applications such as CSA Matter, and also building and factory automation.

## Features

| Items | Features |
| :---: | :---: |
| Core MCU | 32-bit ARM® Cortex®-M33 core |
|  | 78 MHz @ Maximum Operating Frequency |
|  | 1536 KB @Flash |
|  | 256 KB @RAM |
|  | Secure Vault (Secure Boot, TRNG, Secure Key Management, etc $\cdots$ ) |
| Wireless | Thread @OpenThread, Matter support |
|  | BLE5.3 @Thread commissioning, mesh support |
|  | ZigBee Support |
|  | -105 dBm @Min Sensitivity |
|  | 19.5 dBm @Max TX Power |
| Operating Condition | 1.3uA @ Deep Sleep Mode |
|  | 5mA @ RX Mode Current |
|  | 19/160mA @ 10/19dBm Output Power |
|  | 1.8 V to 3.8V @ Operating Voltage |
|  | $-25^{\circ} \mathrm{C}$ to $85{ }^{\circ} \mathrm{C}$, (Optional) $-40^{\circ} \mathrm{C}$ to $125^{\circ} \mathrm{C}$ |
| Peripherals | GPIO, UART, SPI, I2C, PWM, ADC/DAC |
| Dimension | $15 \times 23 \mathrm{~mm}$ |

## Application

- Smart Home - Home appliance, Sensors, switches, door locks, smart plugs, lighting
- Building/Factory Automation

■ Device Usage - End-Device, Router, Boarder Router/Hub/Gateway/Controller

## Part Code

| E | D | T | 2 | 4 | 0 | 0 | B/R/L | - | S | A | P/E |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Part Name1 |  |  |  |  |  |  | Option 1 |  | Part Name2 |  | Option 2 |

## B/R/L Options

■ B: Border Router, Gateway, Hub Controller Application

■ R: Router Application \& End-Node (Sleep Mode Not supported)

■ L: End-Node Device Application, Sleep Mode support

## P/E Antenna Options

- P: On-Board PCB Antenna
- E: UFL Connector for External Antenna

## Part Code Example:

- EDT2400B-SAP $\rightarrow$ Border Router/Gateway FW flashed, and On-Board PCB antenna is used
- EDT2400R-SAP $\rightarrow$ Router \& end device FW flashed, and On-Board PCB antenna is used

■ EDT2400L-SAE $\rightarrow$ Sleepy end-device FW flashed, and UFL RF connector is used for external antenna

## 1. EDT2400X-SA System

### 1.1 Block Diagram

The system's internal block and external interface of the EDT2400X-SA are shown in the figure below.

### 1.2 PIN Map

EDT2400X-SA consists of a total of 33 pins of multiplexed I/O and power.

에드웍스
Electronic Device Works

### 1.3 Pin Description

I/O pins of EDT2400 are multiplexed with various peripheral functions. Therefore, you can switch to other functions by changing the default settings.

| No | Name | I/O | Default Function |  |
| :---: | :---: | :---: | :---: | :---: |
| Pin Map on Left Side |  |  |  |  |
| 1 | PB05 | - | GPIO |  |
| 2 | PB04 | 0 | LED_LIGHT | GPIO output, <br> The output is toggled according to the input of pin $3 .$. |
| 3 | PB03 | I | SW1 | GPIO input, <br> The output of pin 2 toggles by input of this port. |
| 4 | PB02 | 0 | LED_STATE | GPIO output, <br> Indicate the operating status of the system. |
| 5 | PB01 | 0 | SW0 | GPIO input, <br> Controls the mode of operation of the module. |
| 6 | PB00 | - | GPIO |  |
| 7 | PA00 | - | GPIO |  |
| 8 | PA01 | 0 | SWCLK | Interface for debug and FW download |
| 9 | PA02 | I/O | SWDIO | Interface for debug and FW download |
| 10 | PA03 | 0 | SWO | Interface for debug and FW download |
| 11 | NC | - |  |  |
| Pin Map on Bottom Side |  |  |  |  |
| 12 | PA04 | 0 | USR_TXD | UART interface, Baud Rate 115200bps for command/response when using Host MCU |
| 13 | PA05 | I | USR_RXD | UART interface, Baud Rate 115200bps for command/response when using Host MCU |
| 14 | PA06 | - | GPIO |  |
| 15 | PA07 | - | GPIO |  |
| 16 | PA08 | 0 | VCOM_TXD | UART interface, Baud Rate 115200bps for log message and CLI command input |
| 17 | PA09 | I | VCOM_RXD | UART interface, Baud Rate 115200bps for log message and CLI command input |
| 18 | GND | P | GND | Power Ground |
| 19 | VDD | P | VDD | Power Input, 1.8V~3.8V |
| 20 | RESETN | I | RESETN | Reset input signal, Power-on-reset function supported |
| 21 | PD05 | - | GPIO |  |
| 22 | PD04 | - | GPIO |  |
| Pin Map on Right Side |  |  |  |  |

| 23 | PD03 | - | GPIO |  |
| :--- | :--- | :---: | :--- | :--- |
| 24 | PD02 | - | GPIO |  |
| 25 | PC00 | O | SPI_CS | Master mode, SPI Slave Enable signal |
| 26 | PC01 | O | SPI_MOSI | Master operation, SPI data output to slave |
| 27 | PC02 | I | SPI_MISO | Master operation, SPI data input from slave |
| 28 | PC03 | O | SPI_CLK | Master operation, SPI clock output signal |
| 29 | PC04 | - | GPIO |  |
| 30 | PC05 | O | I2C_SCL | Master operation, I2C clock signal |
| 31 | PC06 | - | GPIO |  |
| 32 | PC07 | I/O |  | Master operation, I2C data Input/Output signal |
| 33 | GND | P | GND | Power GND |

### 1.4 Peripherals

## GPIO (General Purpose Input/Output)

Each GPIO pin can be individually configured as either an output or input. More advanced configurations including open-drain, open-source, and glitch-filtering can be configured for each individual GPIO pin. The GPIO subsystem supports asynchronous external pin interrupts.

## Timer/Counter/PWM

TIMER peripherals keep track of timing, count events, generate PWM outputs and trigger timed actions. The core of each TIMER is a 16 -bit or 32 -bit counter with up to 3 compare/capture channels. Each channel is configurable in one of three modes. In capture mode, the counter state is stored in a buffer at a selected input event. In compare mode, the channel output reflects the comparison of the counter to a programmed threshold value. In PWM mode, the TIMER supports the generation of pulse-width modulation (PWM) outputs of arbitrary waveforms defined by the sequence of values written to the compare registers

## RTC (Real-Time Clock)

The RTC with a 32-bit counter can be clocked by any of the onboard low-frequency oscillators, and it is capable of providing system wake-up at user-defined intervals.

## USART/SPI (Universal Synchronous/Asynchronous Receiver/Transmitter)

USART supports full duplex asynchronous UART communication with hardware flow control as well as RS-485, SPI, MicroWire, and 3-wire. It can also interface with devices supporting:

- ISO7816 SmartCards
- IrDA
- $\mathrm{I}^{2} \mathrm{~S}$

## $\mathrm{I}^{2} \mathrm{C}$ (Inter-Integrated Circuit Interface)

The $\mathrm{I}^{2} \mathrm{C}$ module provides an interface between the MCU and a serial $\mathrm{I}^{2} \mathrm{C}$ bus. It is capable of acting as both a master and a slave and supports multi-drop buses.

## ADC (Analog to Digital Converter)

The ADC is a hybrid architecture combining techniques from both SAR and Delta-Sigma style converters. The ADC includes integrated voltage reference options. Inputs are selectable from a wide range of sources, including pins configurable as either single-ended or differential.

The ADC supports three operational modes:

- Normal Mode (all devices): Flexible speed and performance, 12-16 bits output resolution
- High-Speeded Mode (select devices): Doubles output speed of Normal mode with similar performance, 1216 bits output resolution
- High Accuracy Mode (select devices): Optimized for low-rate, high-performance applications, with 20-bit output resolution

## DAC (Digital to Analog Converter)

The Digital to Analog Converter (DAC) can convert a digital value to an analog output voltage. The DAC is a fully differential, $500 \mathrm{Ksps}, 12$-bit converter. The DAC may be used for a number of different applications such as sensor interfaces or sound output. The DAC can generate high-resolution analog signals while the MCU is operating at low frequencies and with low total power consumption. Using DMA and a timer, the DAC can be used to generate waveforms without any CPU intervention.

Electronic Device Works

## 2. Electrical Characteristics

### 2.1 Absolute Maximum Ratings

Stresses beyond those listed below may cause permanent damage to the device.

| Parameter | Test Condition | Min | Typ | Max | Unit |
| :--- | :--- | :---: | :---: | :---: | :---: |
| Storage temperature (TA) | Default Module | -30 | - | +120 | ${ }^{\circ} \mathrm{C}$ |
|  | Optional Module | -40 |  | +125 |  |
| Voltage on VDD |  | -0.3 | - | 3.8 | V |
| Voltage on GPIO |  | -0.3 | - | VDD +0.3 | V |
| Voltage on RESETn |  | -0.3 | - | 3.8 | V |
| Current per I/O pin | Sink | - | - | 50 | mA |
|  | Source | - | - | 50 | mA |

### 2.2 General Operating Conditions

| Parameter | Test Condition | Min | Typ | Max | Unit |
| :--- | :--- | :---: | :---: | :---: | :---: |
| Operating Ambient temperature | Default Module | -20 | - | +85 | ${ }^{\circ} \mathrm{C}$ |
|  | Optional Module | -40 |  | +125 | ${ }^{\circ} \mathrm{C}$ |
| OpDD Supply Voltage |  | 1.8 | 3.3 | 3.8 | V |
|  | RX Mode | - | 5 | - | mA |
|  | TX Mode, $19.5 \mathrm{dBm} @ \mathrm{CW}$ | - | 160 | - | mA |
|  | Sleep Mode @End-Deve | - | 1.3 | - | uA |
| Flash Data Retention | $\mathrm{TA} \leq 125^{\circ} \mathrm{C}$ | 10 | - | - | Years |
| Flash erase cycles before failure | $\mathrm{TA} \leq 125^{\circ} \mathrm{C}$ | 10,000 | - | - | Cycles |
| GPIO Input Low Voltage |  | - | - | $0.3 *$ VDD | V |
| GPIO Input High Voltage |  | $0.7 *$ VDD | - | - | V |
| GPIO Output High Voltage | Source 20 mA | $0.8 * \mathrm{VDD}$ |  |  | V |
| GPIO Output Low Voltage | Sink 20mA |  |  | $0.2 * V D D$ | V |
| RESETN low time |  | 100 |  |  | ns |

## 3. Wireless Characteristics

### 3.1 Transmitter Characteristics

### 3.1.1 RF Transmitter General Characteristics for the 2.4 GHz Band

Unless otherwise indicated, typical conditions are TA $=25^{\circ} \mathrm{C}$, RF center frequency $=2.45 \mathrm{GHz}$. VDD $=3.3 \mathrm{~V}$

| Parameter | Test Condition | Min | Typ | Max | Unit |
| :--- | :--- | :---: | :---: | :---: | :---: |
| RF frequency range |  | 2400 | - | 2483.5 | MHz |
| Maximum TX power |  | - | 19.5 | - | dBm |

### 3.1.2 RF Transmitter Characteristics for 802.15.4 DSSS-OQPSK in the 2.4 GHz Band

Unless otherwise indicated, typical conditions are $\mathrm{TA}=25^{\circ} \mathrm{C}$, RF center frequency $=2.45 \mathrm{GHz}$. VDD $=3.3 \mathrm{~V}$

| Parameter | Test Condition | Min | Typ | Max | Unit |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Error vector magnitude per 802.15.4-2011 | Average across frequency, signal is DSSS-OQPSK reference pack- et, VDD $=3.3 \mathrm{~V}, \mathrm{P}_{\text {out }}=19.5 \mathrm{dBm}$ | - | 3 | - | \% rms |
| Power spectral density limit | Relative, at carrier $\pm 3.5 \mathrm{MHz}$, VDD $=3.3 \mathrm{~V}, \mathrm{P}_{\text {out }}=19.5 \mathrm{DBM}$ | - | -50.2 | - | $\begin{gathered} \mathrm{dBc} / \\ 100 \mathrm{kHz} \end{gathered}$ |
|  | Absolute, at carrier $\pm 3.5 \mathrm{MHz}$, $\mathrm{VDD}=3.3 \mathrm{~V}, \text { Pout }=19.5 \mathrm{dBm}$ | - | -38.3 | - | $\begin{gathered} \mathrm{dBm} / \\ 100 \mathrm{kHz} \end{gathered}$ |
|  | Per FCC part 15.247, VDD = $3.3 \mathrm{~V}, \mathrm{P}_{\text {out }}=19.5 \mathrm{dBm}$ | - | 0.5 | - | $\begin{aligned} & \mathrm{dBm} / \\ & 3 \mathrm{kHz} \end{aligned}$ |
|  | ETSI 300.328 Pout $=10 \mathrm{dBm}$ | - | 8 | - | dBm |
| Occupied channel bandwidth per ETSI EN300.328 | 99\% BW at highest and lowest channels in band, Pout $=10 \mathrm{dBm}$ | - | 2.2 | - | MHz |

3.1.3 RF Transmitter Characteristics for Bluetooth Low Energy in the 2.4 GHz Band $\mathbf{1}$ Mbps Data Rate

Unless otherwise indicated, typical conditions are $\mathrm{TA}=25^{\circ} \mathrm{C}$, RF center frequency $=2.45 \mathrm{GHz}$. VDD $=3.3 \mathrm{~V}$

| Parameter | Test Condition | Min | Typ | Max | Unit |
| :--- | :--- | :--- | :--- | :--- | :--- |

|  | Signal is reference signal, 255 byte payload ${ }^{1}$ | - | -93.3 | - | dBm |
|  | With non-ideal signals 31 | - | -93.1 | - | dBm |

3.2.5 RF Receiver Characteristics for Bluetooth Low Energy in the $\mathbf{2 . 4} \mathbf{~ G H z}$ Band 500 kbps Data Rate

Unless otherwise indicated, typical conditions are $\mathrm{TA}=25^{\circ} \mathrm{C}$, RF center frequency $=2.45 \mathrm{GHz}$. VDD $=3.3 \mathrm{~V}$

| Parameter | Test Condition | Min | Typ | Max | Unit |
| :--- | :--- | :---: | :---: | :---: | :---: |
| Max receiver input level | Signal is reference signal ${ }^{1}$ | - | 10 | - | dBm |
| Sensitivity | Signal is reference signal, 37 byte <br> payload $^{2}$ | - | -101.4 | - | dBm |
|  | Signal is reference signal, 255 <br> byte payload 1 | - | -100.1 | - | dBm |
|  | With non-ideal signals 31 | - | -99.1 | - | dBm |
|  | Interferer is reference signal at -3 |  |  |  |  |
| MHz offset ${ }^{1546}$ | - | -54.5 | - | dB |  |

### 3.2.6 RF Receiver Characteristics for Bluetooth Low Energy in the $\mathbf{2 . 4} \mathbf{~ G H z}$ Band $\mathbf{1 2 5}$ kbps Data Rate

 Unless otherwise indicated, typical conditions are $\mathrm{TA}=25^{\circ} \mathrm{C}$, RF center frequency $=2.45 \mathrm{GHz}$. VDD $=3.3 \mathrm{~V}$| Parameter | Test Condition | Min | Typ | Max | Unit |
| :--- | :--- | :---: | :---: | :---: | :---: |
| Max receiver input level | Signal is reference signal $^{1}$ | - | 10 | - | dBm |
| Sensitivity | Signal is reference signal, 37 byte <br> payload $^{2}$ | - | -105.7 | - | dBm |

Electronic Device Works

|  | Signal is reference signal, 255 <br> byte payload 1 | - | -105.3 | - | dBm |
| :--- | :--- | :---: | :---: | :---: | :---: |
|  | With non-ideal signals 31 | - | -104.8 | - | dBm |

Electronic Device Works

### 3.3 Antenna Radiation

--- TBD

## 4. Design Consideration

### 4.1 Dimension

## Unit [mm]

4.2 PCB PAD Recommendation

### 4.3 Layout Recommendation on Host Board

In applications using the On-board PCB antenna built into the module, refer to the following design guide. If an external antenna is used, it is not necessary to follow the design guide below.

Electronic Device Works

### 4.4 Example Schematic
